

UNIVERSAL RTT PLATFORM MOUNT

PART NO. T050801589

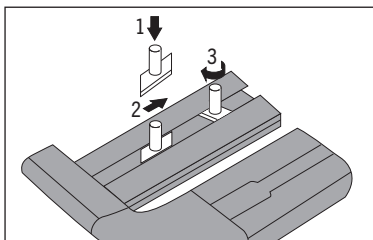

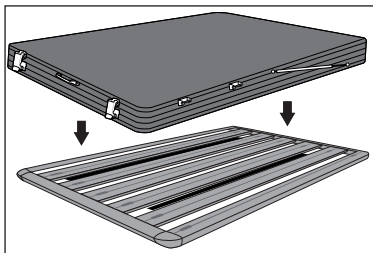

DARCHE

IMPORTANT

Before setting up for the first time read the instructions carefully. Make sure the product is fully assembled before use as per the instructions outlined.

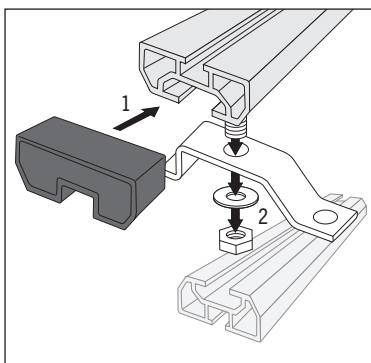

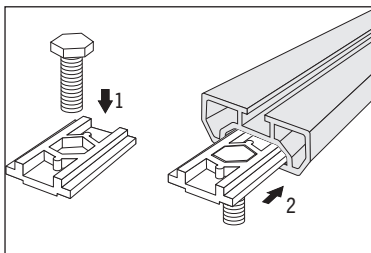

STEP 1:

On your platform rack, identify two pairs of slats between which each of the mounting channels on your roof top tent will sit. In each of the slats, insert four channel bolts.

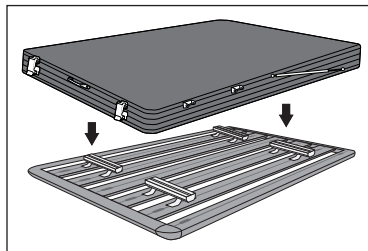

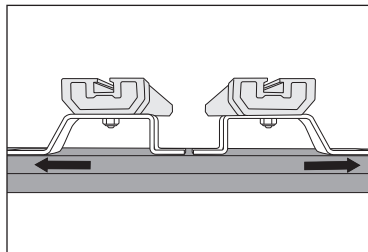

STEP 2:

Slide two slide plates and bolts into the wide channel on each of the crossbars, insert the endcaps, and loosely attach two brackets using the supplied nyloc nuts and washers. The crossbars can be mounted above or below the brackets to suit your setup.

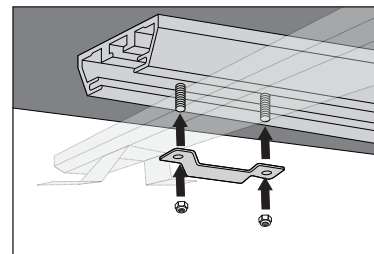

STEP 3:

Attach two crossbar/bracket assemblies to each of the slat pairs identified in Step 1. Ensure the brackets at either end of the slats are pointed in opposite directions and that the crossbars are spaced appropriately according to the manufacturer's recommendations of your roof top tent.

STEP 4:

Mount your roof top tent to all four crossbars according to the manufacturer's recommendations of your roof top tent.

ATTENTION:

It is important to periodically check that all parts are fully secured, and prolonged travel on uneven, rough, or corrugated terrain will require more frequent inspections.
